# Quorum Public Transaction

Public Transaction

- Transactions payload is visible to all the participants of the same Quorum network.

- They are created as per the standard of Ethereum transactions.

- Ethereum transaction supports three types of transactions:
    - **Ether transaction from one party to another.**
    - **Creation of a smart contract.**
    - **Transacting with a smart contract.**

Components of Public Transaction

- **Address:** Destination wallet address.

- **Data (EVM Bytecode):** Hex formatted, compiled smart contract creation code.

- **Value (Ether):** Amount of Ether you wish to deposit in the smart contract.

- **GAS Price:** Amount prepared in Ether per unit of gas

- **GAS Limit:** The total amount of gas spent on the transaction execution.

How Pubic Transaction is Committed?

THANK YOU!
